

CartFlow — Guide for Store Owners

Your online store for WhatsApp selling. One link. Your team can help run the shop — you stay in control of the money.

What is CartFlow?

CartFlow gives you a **proper online store** for the business you already run on WhatsApp, Instagram, and DMs.

Instead of sending prices and account numbers in chat all day, you share **one link**. Customers open it, browse your products, add to cart, and checkout.

They pay into **your bank account**, upload their payment receipt, and you approve the order from your dashboard on your phone or laptop.

CartFlow does not hold your money. Payment goes straight to you. CartFlow helps you manage your catalog, orders, stock, and team in one place.

See how it looks: <https://cartflow-839.vercel.app/glow-beauty>

How CartFlow helps your business

Selling on WhatsApp alone

- You repeat prices and account details in every chat
- Payment screenshots get lost in messages
- Stock mistakes — two customers pay for the last item
- No order numbers or tracking for customers
- Everything depends on you being online

With CartFlow

- **One store link** for WhatsApp status, bio, and broadcasts
- **Product catalog** with photos, prices, and sizes
- **Checkout** with customer details and delivery fees
- **Receipt upload** so every payment has proof attached to the order
- **Order dashboard** to approve, decline, refund, and update status
- **Stock tracking** that updates when you approve payment
- **Order tracking** so customers can check progress with their order number

- **Team accounts** so staff can help with orders and products while **you** control payments and settings
-

Run your store even when you are not there

Many store owners want to grow but cannot be in the shop or on their phone every hour. CartFlow lets you **delegate work to your team** without giving away control of your money.

What only you (the owner) can do

- **Approve or reject payments** — staff cannot confirm that money has arrived
- **Change bank details** — your account information stays with you
- **Billing and plan** — subscription is owner-only
- **Invite or remove team members**
- **Change store branding and settings**

You can approve orders from anywhere — at home, traveling, or after closing time. Your team handles the daily work inside the limits you set.

Every important action is recorded. You can see who updated an order or changed a product (for example: *"Order marked Shipped by Amaka"*).

Team roles — what each person does

Add team members at **Dashboard** → **Settings** → **Team**. Available on the **Pro** plan (up to 5 people).

When you add someone, you choose a **role**. Each role has a clear job. You can also use **Custom** to pick permissions yourself.

Owner (you)

Your job: Run the business and control the money.

- Approve or decline customer payments after checking receipts
- View revenue and analytics
- Set prices, bank details, delivery zones, and store profile
- Add or remove team members
- Decide who can access what

You are the only person who can approve payments and change bank details.

Fulfillment

Best for: Someone who packs orders, arranges delivery, or updates customers on their package.

Their daily work:

- See all incoming orders
- Mark orders as **Processing** when packing starts
- Mark orders as **Shipped** when sent out or handed to a rider

- Mark orders as **Delivered** when the customer receives it
- Add internal notes (for example: "Rider called, delivery by 4pm")
- Contact customers about their order if needed

They cannot: Approve payments, change prices, add products, delete anything, or see your bank details.

Use this role for a shop assistant, delivery coordinator, or anyone who moves orders from "paid" to "delivered".

Staff

Best for: A general shop helper who supports day-to-day selling but should not touch money or settings.

Their daily work:

- View and update orders (status and notes)
- Add and edit products (photos, prices, descriptions)
- Manage catalog categories and tags
- Create and edit promotions and discount codes
- View sales analytics

They cannot: Approve or reject payments, delete products or promotions, change store settings, edit the storefront theme, or manage the team.

Use this role for a trusted employee who helps with products and orders but does not run the business.

Catalog

Best for: Someone who only manages what you sell — stock, photos, and listings.

Their daily work:

- Add new products to your store
- Update photos, descriptions, and prices
- Adjust stock quantities
- Organize categories and catalog structure

They cannot: See or manage orders, run promotions, approve payments, or change any store settings.

Use this role for someone who uploads inventory while you focus on sales and customer messages.

Manager

Best for: A senior employee you trust to run almost everything except money and ownership.

Their daily work:

- Everything Staff can do, plus:

- Delete products and promotions when needed
- Full day-to-day operations across orders, catalog, and promotions
- View analytics

They cannot: Approve payments, change bank details, manage billing, edit storefront branding, or add/remove team members.

Use this role for a store manager who runs the floor while you oversee from a distance.

Custom

Best for: When none of the presets fit exactly.

You choose each permission individually — orders, products, payments, settings, and more. Useful if you want one person to only update stock, or only handle orders without touching products.

Example: how a busy store owner might set up their team

Person	Role	What they handle
You	Owner	Approve payments, check revenue, set prices and bank details
Shop assistant	Fulfillment	Pack orders, update delivery status, call customers
Product person	Catalog	Upload new items, fix photos, update stock counts
Senior helper	Manager	Oversee daily operations when you are not in the shop

Your store keeps running. You stay in control of every sale that involves money.

How to add a team member

1. Open **Dashboard** → **Settings** → **Team**
 2. Tap **Create login** (share username and password) or **Invite by email**
 3. Select the role: Fulfillment, Staff, Catalog, Manager, or Custom
 4. Your team member signs in at **<https://cartflow-839.vercel.app/login>**
 5. They only see the parts of the dashboard you allowed
-

Why choose CartFlow?

WhatsApp only	CartFlow
Scattered chats	One professional store link
Account number sent manually every time	Shown automatically at checkout
No order numbers	Every order has a unique ID
Stock guessed from memory	Stock tracked per product
Only you can run everything	Team helps with orders and products; you control payments
Informal	Looks like a real online shop

Built for sellers in Nigeria and Africa — mobile-first, simple, and works with bank transfer. No website coding required.

Today: customers pay you by bank transfer. **Coming soon:** card payments via Paystack and Flutterwave.

How to set up your store

1. Go to <https://cartflow-839.vercel.app/signup>
2. Create your account
3. Add your store name, phone, WhatsApp, and **bank details**
4. Upload your logo (optional)
5. Wait for approval — CartFlow reviews new stores
6. Once approved:
 - Add your products (**Dashboard** → **Products**)
 - Set delivery areas and fees (**Settings**)
 - Add team members if needed (**Settings** → **Team**)
 - Copy your link: <https://cartflow-839.vercel.app/your-store-name>
1. Share your link on WhatsApp status, Instagram, and everywhere you sell

Pricing

Plan	Price	What you get
Free	₦0	Up to 10 products, store link, orders, bank transfer checkout
Starter	₦4,999/month	Unlimited products, analytics, low-stock alerts
Pro	₦12,999/month	Everything in Starter + up to 5 team members , extended analytics

Start free. Move to **Pro** when you need staff accounts to help run your store.

Frequently asked questions

Is CartFlow free?

Yes. You can start with up to 10 products at no cost.

Do I need technical skills?

No. If you use WhatsApp and can upload photos, you can use CartFlow.

How do customers pay me?

By bank transfer to your account. They upload a screenshot or PDF as proof at checkout.

Does CartFlow hold my money?

No. Payment goes directly to your bank.

Can I add staff to my store?

Yes, on the **Pro** plan. Give each person a role so they only access what they need.

Can staff approve payments or change my bank account?

No. Only you as the owner can approve payments and manage bank details.

What does the Fulfillment role do?

They handle orders after payment — packing, shipping updates, delivery status, and customer notes. They cannot approve money.

What does the Catalog role do?

They manage products, photos, prices, and stock. They do not see orders.

Can I run my store when I am traveling?

Yes. Approve payments from anywhere on your phone. Your team updates order status and products while you control the sales.

Do customers need to create an account?

No. They checkout as guests with name, phone, and address.

Can I charge different delivery fees for different areas?

Yes. Use delivery zones (for example Lekki, Mainland, Pickup).

Does stock update when I approve an order?

Yes, if you turn on auto-deduct in Settings. Stock is restored if you refund an order.

Will I get an email when someone orders?

Not yet. Check your dashboard for new orders. Email alerts are coming in a future update.

What do I need before signing up?

Store name, phone, WhatsApp, bank details, and product photos with prices ready.

When will card payments (Paystack) be available?

Coming soon. For now, bank transfer works for most WhatsApp sellers.
